Summary

AI/ML Engineer with hands-on experience in building machine learning models, NLP pipelines, and deep learning systems using Python, PyTorch, and scikit-learn. Skilled in data preprocessing, model training, and deployment. Also experienced in frontend development with React.js and Next.js, enabling full-stack solution building.

EDUCATION

Lok Jagruti University, Ahmedabad

B.Tech/B.E., Information Technology

- **GPA:** 9.2%

Work Experience

Solguruz LLP

Frontend Intern

Feb 2024 - Aug 2024

Ahmedabad

Integrated advanced functionalities in the admin dashboard with react.js, improving admin efficiency by streamlining data management processes. Developed story-sharing functionality for a social media platform using Next.js

Softcomm Solutions

Frontend Developer

Mar 2025 - Present

Ahmedabad

Integrated AI-driven features such as smart recommendations and chat automation into web applications, and implemented secure cloud deployments using AWS. Enhanced system performance and data protection through role-based access controls and encryption standards.

PROJECTS

Baymax

Apr 2025 - Jun 2025

- Developed a secure video conferencing platform enabling real-time consultations between patients and doctors.
- Implemented a Generative AI-powered chatbot using Hugging Face models to assist users with health-related queries, appointment guidance, and general support, enhancing user engagement and reducing manual workload.

Predictive Models

Apr 2025 - Jun 2025

- I developed multiple predictive models using machine learning techniques from Scikit-learn (sklearn). This involved data preprocessing, feature engineering, model selection, training and evaluation using algorithms such as Linear Regression, Decision Trees, Random Forest, and Support Vector Machines (SVM), among others. I compared model performance using appropriate metrics like accuracy, precision, recall, F1-score, and ROC-AUC to select the best-performing model for the task.

Mighty Movers

Feb 2024 - May 2024

- Mighty Movers is a web platform I worked on that replicates the core functionalities of the Porter logistics website. Built using Next.js for the main platform and React with Ant Design for the admin panel, the project included features such as user authentication (login, signup, forgot password), dynamic and static email API integration, real-time vehicle booking with Google Maps API, voucher-based discount system, Firebase notifications, and Stripe payment integration.
- The admin panel allowed full control over users, enterprises, registered drivers, blog management, role-based access control (read/write/edit/delete), and customizable color schemes.
- The driver dashboard supported order management, live map tracking, and notifications.
- I was responsible for the entire frontend development, including the implementation of Redux for state management, Framer Motion for UI animations, and a rich blog editor interface.

SKILLS

- **Frontend & UI:** Javascript, CSS, HTML, React.js, Redux, Antd, NEXT js, Tailwind, Scss, Zustand
- **Backend & Database:** Node.js, Express, API, MongoDB, SQL, APIs
- **Data Science & AI:** Python, Machine Learning, Artificial Intelligence, Pandas, Numpy, Scikit-Learn, Pytorch, Generative AI
- **Tools & Processes:** Vs code, Jupyter notebook, Github, Gitlab, Google colab, PostgreSQL, Linux

Certification

- **Building Generative AI-Powered Applications with Python:** IBM
- **Exploratory Data Analysis for Machine Learning:** IBM
- **Data Structures:** University of California San Diego
